[Subcritical reactor - Wikipedia](#)

A subcritical reactor is a nuclear fission reactor concept that produces fission. The accelerator driven reactor is independent of this parameter and thus can

[Accelerator-driven subcritical reactor - Wikipedia](#)

An accelerator-driven subcritical reactor is a nuclear reactor design formed by coupling a substantially subcritical nuclear reactor core with a high-energy proton accelerator. It would use thorium as a fuel, which is more abundant than uranium.

[Accelerator Driven Subcritical Reactors - Robert B. Laughlin](#)

The concept of an accelerator-driven subcritical reactor (ADSR) is based on the idea of coupling a fission reactor to a particle accelerator. Currently, the production of energy from nuclear power plants requires the use of critical reactors, in which the number of neutrons released by fission is just enough to sustain a controlled chain reaction.
