An example would be to let  $x(t)A$  represent the variation of air pressure relative to the norm in the case of a sound wave.  $0A$  is the amplitude of the wave which is the peak magnitude of the oscillation.  $k$  is the wave's wave number or more specifically the angular wave number and equals  $2\pi/\lambda$ , where  $\lambda$  is the wavelength of the wave.  $k$  has the units of radians per unit distance and is a

The "Main Wave" (DA) section is 25 percent larger than the second (BC) section. The same can be said about the "response wave" structure. The "response wave" (DA)

We have developed a method of terahertz (THz) solid immersion (SI) microscopy for continuous-wave reflection-mode imaging of soft biological tissues with a sub-wavelength spatial resolution. In order to achieve strong reduction in the dimensions of the THz beam caustic, an electromagnetic wave is focused into the evanescent field volume behind
